

**Quick installation!**

### **Single column floor to wall installation for flat panels.**

A solid solution in any environment.

With the floor to wall column it is very easy to install a relative large flat panel to fragile wall constructions.

The column is mounted on the floor and wall and makes it possible to mount one or several screens on one location.

The monitor can be installed at any desired height.

The monitor cabling is easily stored in the internal cable ducts which are accessible from the outside.

- ▲ **Suitable for fragile wall constructions**
- ▲ **Rigid and flexible construction**
- ▲ **Single or multi screen installation**
- ▲ **Integrated cable ducts**
